SUMMARY

Informatics Management (D3) graduate from Politeknik Astra (GPA 3.53/4.00) with hands-on experience in planning, requirements analysis, design, development, and manual testing in team projects, as part of the dev team. Experienced in building web and mobile apps with Next.js, ASP.NET, React, React Native, Laravel, and Spring Boot, using SQL Server, MySQL, and Oracle. Final project at PT Astra Daihatsu Motor: a timing belt monitoring system that uses computer vision on an edge device. Looking to contribute to data-driven IT solutions.

WORK EXPERIENCE

Maintenance Engineering Intern | PT Astra Daihatsu Motor **Jan 2026 - Jul 2026**
Digitalization and computer vision development

- Identified recurring timing belt failures on the press line caused by tooth loss, and turned the pain points of manual inspection into requirements for digital monitoring.
- Designed and deployed a real-time computer vision system that classifies belt condition as Normal, Warning, or NG. Collected data on site and tested the system under real production conditions on an NVIDIA Jetson Orin Nano Super.
- Reached 96% mAP@50 and a P95 response time of 0.225 s against a 2.0 s target. This supports the division's move from manual inspection to digital monitoring.
- Owned the analysis, planning, design, and build. The Maintenance Engineering and Maintenance Press teams helped with field work such as making and mounting brackets. Reported progress to industry supervisors and academic advisors.

Sales & Distribution Data Validation Intern | PT Forisa NusaPersada **Jun 2022 - Aug 2025**

- Recorded and validated sales and branch distribution data to keep regional and sales performance figures accurate.

Finance, Accounting & Tax Intern | PT Serasi Autoraya (SERA) **Feb 2022 - May 2022**

- Assisted with administrative and financial record keeping, and helped keep company documents accurate and orderly.
- Took part in the division's daily administrative work and learned its processes on the job.

PROJECT EXPERIENCE

Timing Belt Condition Monitoring System | PT Astra Daihatsu Motor **Jan 2026 - Jul 2026**
Tech stack: Python, YOLOv8s-OBB, OpenCV, Flask, React-Vite, MySQL, NVIDIA Jetson Orin Nano, Roboflow

- Handled the analysis, planning, design, and build as a final project. The Maintenance Engineering and Maintenance Press teams supported the field work (brackets and installation).
- Trained a custom YOLOv8s-OBB model on a self-annotated Roboflow dataset to classify angled belt teeth as Normal, Warning, or NG. Inference runs offline on NVIDIA Jetson hardware.
- Built a 3-tier system (React-Vite dashboard, Flask REST API, MySQL) that runs without internet access.
- Added automatic snapshots when an anomaly is detected, history filters from daily to yearly, search, and Excel report export.
- Reached 96% mAP@50 and a P95 response time of 0.225 s against a 2.0 s target.

Campus Facility Booking System | Campus Project **Sep 2025 - Dec 2025**
Tech stack: Next.js, ASP.NET, SQL Server

- Co-initiated the system to replace manual facility requests with online booking and asset tracking.
- Built 3 responsive UI pages and the core booking workflows on REST APIs, as Full-Stack Developer.
- Modeled the Purchase Requisition workflow and drew UML use case and activity diagrams, so the team and stakeholders agreed on the system scope.

MINFOIN, Mobile Information App | Campus project **Mar 2025 - Jul 2025**
Tech stack: React Native, ASP.Net API, SQL Server

- Built an Android app where Informatics Management students and academic staff find announcements, event schedules, and shared resources in one place.

- Designed the UI in React Native and the SQL Server database. Delivered 6 master-data modules and 1 core transaction module.

Master Part Safety Grade Migration | PT Astra Honda Motor **Feb 2025 - Jul 2025**
Tech stack: HTML, Java Spring Boot, Oracle

- Performed bug fixing and UI enhancements for internal part-data management modules built with Java Spring and Oracle.
- Optimized data upload features and implemented automated validation to ensure smooth database synchronization and eliminate manual entry errors.

EDUCATION

Politeknik Astra (Astra Polytechnic) | D3 Informatics Management **2023 - 2026**
GPA 3.53/4.00
Focus: Software Engineering, Database Systems, System Modeling, Requirements Analysis, Mobile Programming, Computer Vision

MK Negeri 36 Jakarta | Multimedia **2020 - 2023**
SCORE 86/100
Focus: UI design fundamentals, visual communication, digital content creation

---

ORGANIZATION

Tim Paskibra ASTRAtech **Jul to Aug 2024 & 2025**
Member
Served on the campus flag-ceremony team for the 79th and 80th Independence Day ceremonies and other campus events, staying disciplined through intensive training and promoting nationalism and discipline

Media & Content Manager **2024 - 2025**
Student Executive Board (BEM) Politeknik Astra
Managed BEM's information media, planning, producing and distributing visual and narrative content across digital platforms to keep its programs visible, strengthen its image and raise audience engagement.

Event Division Coordinator **2024**
NOVASTECH 2024 Committee
Led the division in designing and running the event concept, coordinating preparation with guest stars and stakeholders and making quick on-site decisions to keep the event on track.

CERTIFICATION & AWARDS

MikroTik Certified Network Associate (MTCNA) **Feb 2025**
MikroTik

Samsung Innovation Campus, Code Kickstart: Python Programming **Oct 2025**
(Batch 7, 2025/2026)

NDG Linux Unhatched 2024 **Mar 2024**
Cisco Networking Academy

Virtual Machine Fundamental **Feb 2024**
Aguna Course

3rd Place, Scientific Writing Competition **2025**
NOVASTECH, BEM Politeknik Astra

National Finalist, Huawei ICT Competition 2024-2025 **2024**
Network Track, Huawei ICT Academy

TECHNICAL SKILL

AI / Computer Vision	: YOLOv8 (OBB), OpenCV, Roboflow, image processing, NVIDIA Jetson (edge AI)
Languages	: Python, JavaScript, Java, C#, SQL
Backend and API	: Flask, ASP.NET, Java Spring Boot, RESTful API
Database and architecture	: SQL Server, MySQL, Oracle (basic), 3-tier architecture
Tools and methods	: Postman, VS Code, Visual Studio, IntelliJ, Android Studio, Figma, draw.io, SDLC, Waterfall, system prototyping, UML, Git, Github
